

Supercruncher Release 6.18.2012 - Mapping Legends, Data Purging, and Viewing Filters

Release Goals:

- Fast and Easy access to add new Data- Improve scheduling of web files
- New Ways to visualize your data- Metric-less tables, Improved Mapping
- Simplify and improve the use - Usability improvements with dashboards
- Data Security/Management - maintain safe haven for data collaboration

New Features:

- **Geographic Data Mapping** - you add a legend with the color ranges to your map. The data points now have labels. US counties have labels.
- **Datasets and Templates Purging**- datasets can be marked as Obsolete and become automatically purged after 10 days. The reports are labeled with expiration date and the label "Obsolete" in the title.
- **Dashboard UI Improvements based on Feedback** - when viewing a widget on a dashboard you can view the the filters applied to make the table or chart. This adds better context understand to the view.
- **Embed Dashboard Table or Chart in a Webpage** - you can now embed a table or chart into an external webpage with a simple snippet of code.
- **Scheduled Web Hosted CSV file**- you can now simply schedule the fetching and updating of a CSV file that is in a zip file and that is hosted on a web. This speeds up fetching and enables access to more data.
- **Several Bug Fixes**- lot of little mapping fixes, exporting tables and charts
