

# Local Search

To perform a local search, the user must be on the module they want to search within.

**\*Note:**

1. When performing a Local Search, make sure to select the correct filter to search within. The 'All' filter will get the user the best results.
2. When performing an Advanced Search, remember to select the right criteria for 'Match All of the Following' criteria or to 'Match Any of the Following' criteria, which will change the amount of results that the user obtains.
