

Users and Access Management

The modules included in the Users & Access Management section allow administrators to create users and associate them to roles, profiles, and assign sharing rules that determine their permissions in terms of access to modules and records owned by other users. This section also contains modules that will allow the administrator to monitor users within the site.

USERS & ACCESS MANAGEMENT

Users

Manage users who can access Amped

Roles

Set up hierarchy of roles and assign to the users

Profiles

Manage user-specific modules access to different Roles

Groups

Manage different types of teams based on roles, users, and profiles
