

Voice Integration

With AMPED Voice, place and receive calls directly from the browser you are working in or from the AMPED CRM Sales and Insights mobile app. Save time and track calls more efficiently with these great voice features:

Click-to-Dial – One click of the mouse allows you to place a call from your browser to easily contact your prospects.

Automatic Call Logging – Each outbound and inbound call is automatically logged as an activity in AMPED saving you valuable time by limiting data input.

Call Notes – Add notes during your call to the automatic call activity to remind yourself of the outcome.

***Note: You must allow pop-ups in your browser in order to use the voice features.**
