

AMPED & MAXvoice Best Practices

AMPED and MAXvoice are a match made in heaven! The combination of powerful features from both platforms allow you to Click-to-Dial, Automatically Log Calls and more! Below are best practices to use the features to their fullest affect.

Using Desk Phone for Calls*

- Turn off the web phone in MAXcore and use the desk phone to enable call pops and banners in AMPED.
- Make sure the web phone icon is green – this means the web phone is off.

- Make sure voice settings are configured in User Preferences.
- You can place calls directly from records in AMPED or can dial non-associated numbers from your desk phone.
- You can then create new leads/contacts in the Call Records section of the "Messages" module in AMPED.

Using Mobile App for Calls

- Calls can be placed directly to leads, contacts and accounts from the mobile app on your mobile phone.
- This will automatically create and relate a call activity to that record.
- The automated call activity can be edited in both the mobile app and the web app.
- Calls placed to non-associated numbers from your mobile phone **will not** be sent to your Call Records.
- You will have to manually add the activities for any calls made from a mobile phone while not in the AMPED mobile app.

Using MAXvoice Web Phone for Calls

- Turn on the web phone in MAXcore – the web phone icon should be red.

- The call features will work in the same way as the desk phone.
- Make sure the voice settings are configured in User Preferences.

*Recommended method while in the office.
