

Supercruncher Release 11.26.2011 - Simplified Report Tab and Field Setup

Improve the usability and speed of setting up tabs and fields in a report. Support for exporting data from a table to CSV format.

- **Quickly Add Fields to a Tab** - quickly add a field to a tab when I have hundred or more fields because I want to easily organize my fields into tabs
- **Fast sequencing of Fields** - quickly and easily sequence the fields in a report when you have more than 100 fields and want to set the sequence of which fields in the order you want.
- **Notification of failed datasets**- when datasets fail to be loaded into Supercruncher the dataset owner will be notified of the failure by Activity Stream and Watching email. This feature requires the use of the latest version of the DTA.
- **Exporting Report Tables in to CSV** - export a table in a report or dashboard as a csv to manipulate the data in excel or create a local copy of the data.
- **Bug fixes reported post release of 10.4.11**
