Supercruncher Release 8.28.2012 - Number Filters and Slider,Data Transformation, and Formatting

Goals:

- **Empower users to easily "communicate data" in new ways** - Dashboard Number Filters and slider, Data formatting
- **Getting Data in**- Data Transformation preloading, improved scheduling, custom datasets, and DTA improvements

New Features:

- **Formatting of Data fields** - Formatting of the fields is not more consistent through out reports, tables, and charts.
- **Field Sub-Types** - fields can now have subtypes that help with display and formatting of the data. Supported fields include images, HTML, zipcode, geocodes, and phone numbers.
- **Numeric Floating Filters -** numbers can be filtered in a the dashboard text filter.
- **Numeric Slider-** The number filter now has a slider UI option to add to your dashboard.
- **Dashboard and Date Filter Slider Performance Improvements-** We improved the performance of the dashboard with large datasets.
- **Datasets Support for data transformation scripts** - datasets now support a data transformation script prior to loading data into Supercruncher.
- **Dataset Improvements:** bi-hourly time increment scheduling, better connection error handling, and a new JDBC dataset type
- **Dataset Quickbooks support**- supercruncher can now connect to Intuit Quickbooks installed version as well as Quickbooks Online so you can add the data in reports and dashboards.
- **Sprint 63 Bugs, Maintenance, and Support**- 42 issues/tasks fixed
